**Improved Treatment Protocol for Moisture Damaged Skin Due to Weeping Lymphorrhea with Bacterial Colonization**

**Problem**
- Chronic skin changes from edema and venous stasis
- Moisture damaged skin with dried serum and bacterial overgrowth
- AODM, Cardiomyopathy, Renal Disease

**Treatment**
- Silvadene to soften crusted serum
- Fuzzy wale elastic compression controls weeping lymph fluid/exudate

**Outcome**
- Fuzzy wale stockinet dressing up weeping lymph
- Fuzzy wale stockinet controls massive edema
- Bacterial colonization abates

---

**Problem**
- Moisture associated dermatitis skin breakdown with bacterial colonization
- Weeping lymphorrhea after hospital D/C
- Painful dried serum eschar
- Massive ICU fluid resuscitation for sepsis
- Edema due to sepsis, CHF, renal insufficiency

**Treatment**
- Soft debridement after topical hypochlorous acid (HOCl) to soften dry eschar
- Active carbon cloth** on wet areas
- Fuzzy wale elastic compression stockinet* + Robert Jones dressing

**Outcome**
- Dermatitis healed on Day #21

---

**Problem**
- Massive lymphedema with weeping moisture damage, management of the inflamed, from massive lymphedema is the source of lymphorrhea, clearing bacterial overgrowth, and colonized wet limb becomes impossibly challenging

**Treatment**
- Debridement
- Fuzzy wale elastic compression* + Robert Jones dressing

**Outcome**
- Weeping stops on Rx day #10
- Wound is healing at time of death

---

**Problem**
- Lipedema Syndrome [ from the Greek lipo- + oídema, swelling]
- Weeping lymphorrhea
- Moisture associated dermatitis and skin breakdown

**Treatment**
- Active carbon cloth** on moisture damaged skin
- Fuzzy wale elastic compression* + Robert Jones dressing to absorb lymphorrhea

**Outcome**
- L ankle moisture associated dermatitis clears in 4 weeks

---

**Problem**
- Weeping lymph fluid stops with 4 days of Fuzzy Wale Elastic Compression Textile* + Robert Jones dressing, changed day 4 then weekly

**Outcome**
- Weeping lymph fluid stops with 4 days of Fuzzy Wale Elastic Compression Textile* + Robert Jones dressing, changed day 4 then weekly

---

**Conclusion**

The use of Fuzzy Wale Elastic Compression Textile*, Robert Jones dressing, and active carbon cloth** appears to be helpful in improving outcomes in difficult cases, including those with severe lymphedema and moisture damage. The combination of these treatments, along with appropriate debridement, results in rapid healing and resolution of dermatitis. Further research is needed to confirm these findings and to explore the optimal use of these materials in clinical practice.
